Ida Suriana Ismail graduated from MARA Institute of Technology in 1993 with a Diploma in Architecture. Immediately after her graduation, she continued her professional education under the MARA scholarship award at Oxford Brookes University, obtaining a Postgraduate Diploma in Architecture and a Postgraduate Diploma in Urban Design. She had worked in the architectural profession since graduating in 1995 until she joined Universiti Putra Malaysia as a Tutor in November 1997. She then pursued her studies in Master of Science in Information Technology, specialising in Design Collaboration. During her appointment as a lecturer at the Department of Architecture since January 2001, she taught design studio and courses from the construction technology, communication skills, and urban planning cluster.

Ida is also an Autodesk Certified Professional (ACP) for Revit Architecture until November 2019. Among the many courses taught, her passion is in design studio, which she had become studio coordinator for numerous times during her service. With this experience, she was frequently invited as an external assessor and reviewer for students projects in various universities namely Universiti Malaya, Limkokwing University of Creative Technology, UCSI

University, Taylor's University and Universiti Tunku Abdul Rahman. Ida was also responsible for the development, improvement and accreditation of the architectural programme. She is currently the coordinator for the Bachelor of Science in Architecture programme. Ida's research interest is in architecture, urban design, heritage and identity, and also architectural education.

Her expertise in urban design was once sought by IZM Consult to be part of their team for tangible heritage inventory study for Penang, Seberang Perai Utara and Seberang Perai Tengah. Her current consultation project is with Department of Architecture UPM, working on Selangor Royal Mosque and District Mosque Profiling for JAIS. In 2013, Ida has undergone a two-year professional training at MSH Architects and was involved in the design of a few projects including the proposed 1Malaysia Government Servant Housing Development Project (PPA1M) Putrajaya, Mualaf Centre in Tawau Sabah, private residences in Putrajaya and a sales kiosk in Bangi Avenue. With this, Ida looks forward to completing her Part III professional qualification with the Board of Architects Malaysia.
